

# Arc Protection System

**Kumwell**  
Grounding & Lightning Protection System

**KAPS131 Arc Protection System consists of a modular detection system with arc point sensors or fiber optics arc sensors which quickly detect the electric arc and safely extinguish the electric arc in all areas where electrical energy is distributed. KAPS131 is the real-time distributed systems based on high-speed industrial Ethernet technology that can rapidly remove any faults. Therefore it reduces potential severe damages and improves personal safety.**

**Central Unit**

**Feeder Unit**

**Arc Loop Sensor**
